1. Background

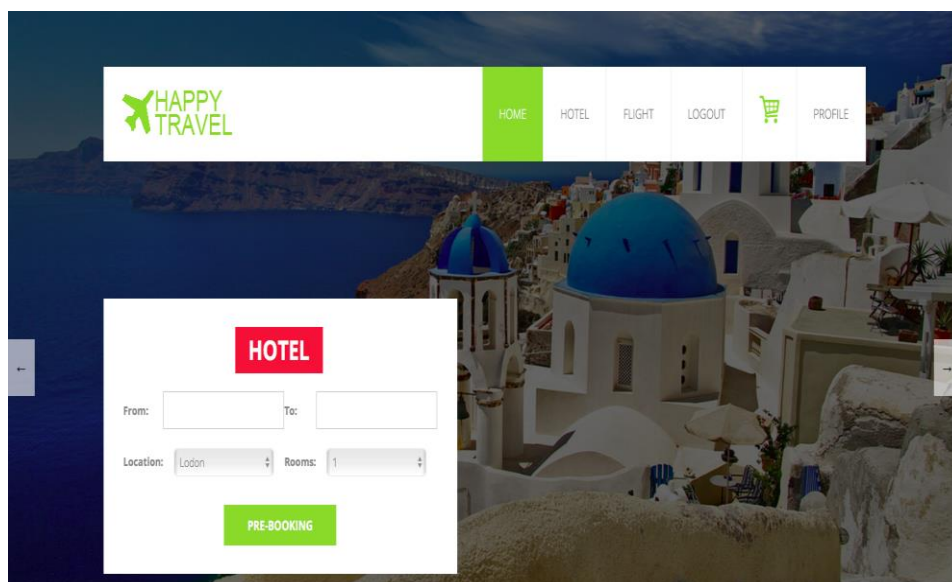

The Happy Travel Ltd is a medium-sized travel agent. This company want to build a website for the tertiary student in Hong Kong. First, the website user interface should be user-friendly. Also, the website should be provide the search function for user searching the items. Moreover, it should be offer the hotel and flight function for user choosing. In addition, the website should be provide a shopping cart, let the user add the item to the cart. Furthermore, it would be having a membership system for user since they need to login to get a discount.

2. User Analysis

2.1. User characteristics

2.1.1. Learning style

The website is target on the student so the user have a high learning skills to use the website. The users' habits of learning are read manual. The student will go to website first, they will see what is the information will show on the website. After they read the website, they can easy to use it. The user enter the website, they will see the photo 1. They enter this website because the want to search or buy the flight ticket or book the hotel. They can click the item on the top menu. It design can let the user easily to read the first page content.

(Photo 1)

2.1.2. Tool preferences

For the student, they want a quick search function and an attractive user interface. It is because student like trendy style and convenient website to easy to use. So the website will provide the search engines, menu and slide show. For the search engines, the website is used the flexible box to include the search item. The user can select the date from the date picker, location, number of room and number of people are also is drop-down menu. When they click the input box, it will pop up the drop down menu or date picker. It is no need to enter the information. The user chooses it only. For the menu, the website is clearly to set the name of the menu. Also, the shopping cart uses a cart logo to present it. Using photo can

easy to show the meaning. For the slideshow, the slideshow both side have a button of changing. That can show to user the slide have another information.

2.1.3. Physical differences

Abilities among different people may be different but this website is target on the tertiary student. So the age is around 18-30. Also, the target group has men and female.

Furthermore, considering of the vision limitations such as color blindness so the website would be set the color of green, white and grey of main color. The font sizes are not too large and too small. The title set to 18px. The content may set 14-16px.

Font sizes (Title)	18px
Font sizes (content)	14-16px
Main color of website	Green, white and grey

2.1.4. Cultural differences

The target customer is the tertiary student so they have a higher education level. Also, the reading level is also higher. For the website using vocabularies, the user also can understand the meaning and they no need to check the dictionary. The website language could use English.

2.1.5. Knowledge of job

For the travel agent is using specialized vocabularies. For example, customer service, booking, flight, hotel, deals, available, main amenities etc.

2.1.6. Application familiarity

For the novice, they need to a guideline to follow the step-by-step using the website.

About the Expert, they no need a guideline to follow the step-by-step using the website. They can learn

2.1.7. Primary and secondary users

Primary User	Secondary User
Hotel reservation clerk	Customer who called the support line
Flight reservation clerk	Tertiary student
Travel agent	

2.2. Techniques for observing and listening to users

2.2.1. Focus groups

Regarding some students are less willing to express opinions in the public, we can do an online observation. About a group of people are asked about their perceptions, opinions, beliefs, and attitudes towards a product or service, we can search another travel agent website for our reference. It can collect some ideas for the new website for student.

2.3. Environment Analysis

The student also use the website to buy the flight ticket and hotel at home. Therefore, we need to set the color is not too bright or too dark. We should provide a comfortable interface for student. Also, the website has enough areas to show the information since the user's computer screen is large. Moreover, we can offer a scroll to move the web page.

2.4. Recruiting Users

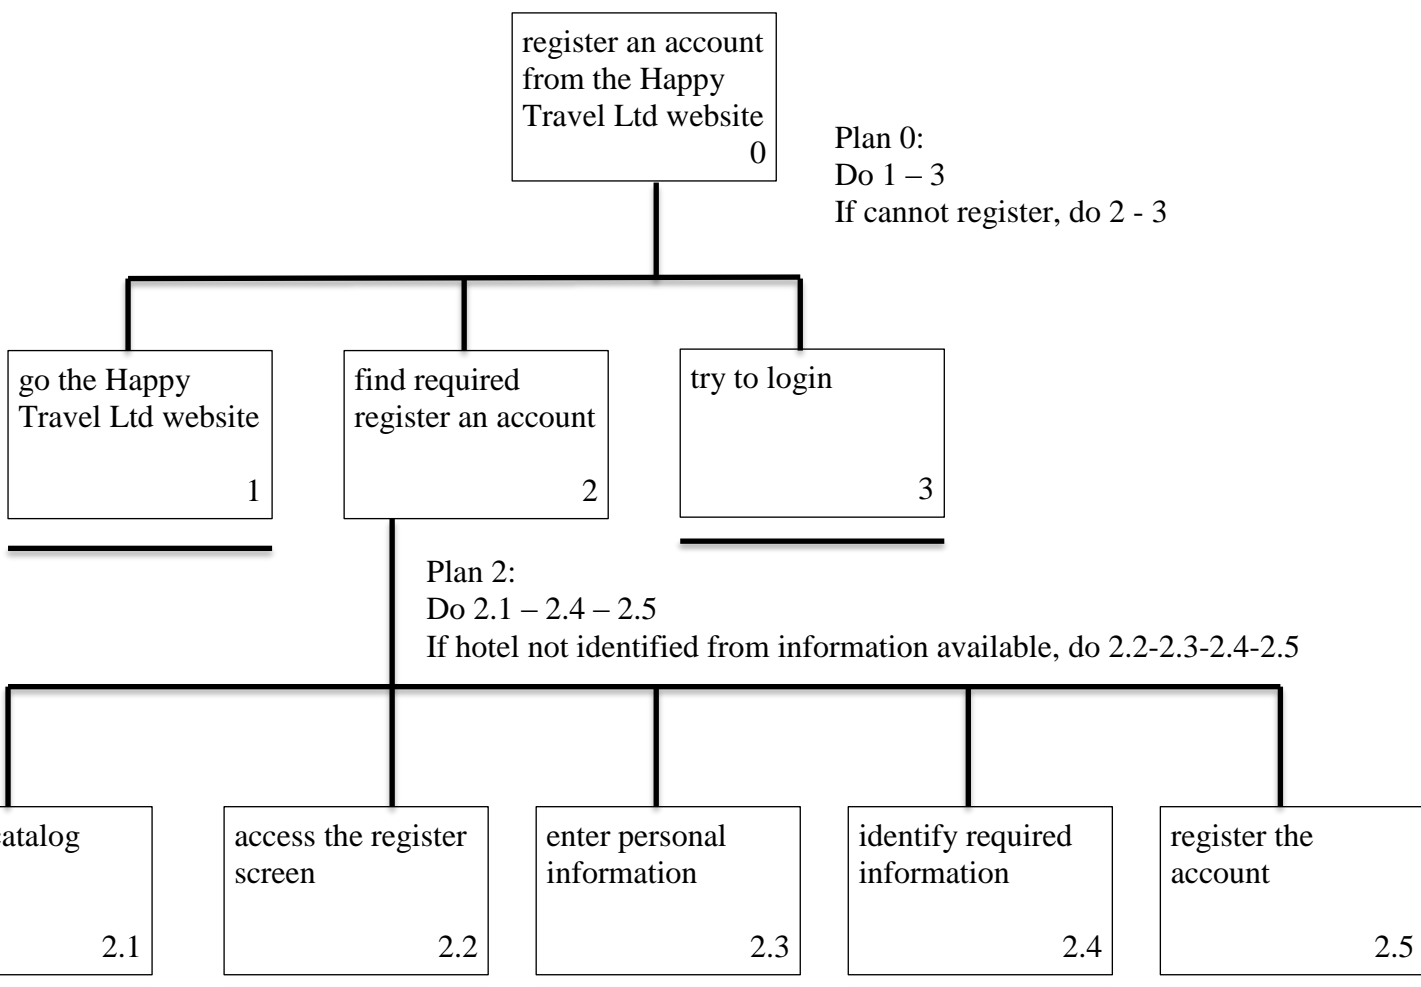

In the website, post notice or ask a professor to announce provide incentives, if they are do an online survey, they can get the prize. It is a good way to get the feedback when we are want to improve the website.

2.5. Task Analysis (HTA)

The website should be go through the 5 main function such as register an account, login an account, book a hotel, book a flight and payment. It can provide a smoothly processing for user browsing.
